splitting dependency on z scaling of propagators

$\boxed{\textit{boundary propagators}}$: the ones that scale linearly with z under BCFW shift
($X_{1\delta}$ and $X_{2\delta}$)

group by # of boundary propagators
$\Rightarrow$ *group them by scaling under BCFW shift*

$$\mathcal{B} = \boxed{\mathcal{B}_0} + \boxed{\mathcal{B}_{-1}} + \boxed{\mathcal{B}_{-2}} + \cdots$$

0 boundary propagators — 1 bond. prop. — 2 boundary prop.
